VAS 150 - 32

PUMP FAMILY DISCHARGE ORIFICE (in mm) IMPELLER DIAMETER (in cm)

Main features

- Vertical shaft.
- Single-stage with closed impeller.
- Multi-blades diffuser type hydraulic in place of volute, and concentric discharge, provides absolute balance of radial forces, and prevents the submerged bearings to operate under load.
- Multi-stage construction upon request
- Axial loads fully balanced with front and rear renewable wear rings. (fig A)
- Ball trust bearing is a double-acting angular contact grease-lubricated.
- Shaft seal is reduced to a throttle bushing, the leakage is drained and returned to the tank (fig B), no other seal of any type in contact with the liquid.
- Auxiliary gland packing stop acid vapors, providing corrosion protection for ball bearings, and safety for maintenance.
- Precision fitting in the pump are corrosion protected, multiple o-rings keep them dry. (fig C)
- Threads and studs are corrosion protected by cap nuts with o-rings.
- Three basic constructions :
 - Lateral discharge for small sizes (fig 1)
 - Discharge through sump header for large sizes (fig 2)
 - Dry installation outside tank (fig 3)

Materials

- Pump casing in acid proof cast iron.
- Impeller, wear rings and shaft sleeves in 14/40/5/5 special stainless steel (NZ 144).
- Bearings in Ferro-silicium.
- Shaft in 20/25/4 stainless steel (1.4539) with FEP lining.

Performances and operating range :

- Capacity : up to **8 800 USGPM**.
- Total head : up to **130 ft**.
- Maximum operating pressure : up to **300 Psi**.
- Operating temperature range : up to **250 °F**.
 - Special construction for high temperature : Heat Recovery System Service upon request.
- Maximum speed : **1 800 rpm** depending on size.
